2.Management of the Various Types Degradable and Non-degradable Waste Management

Management of the various types of degradable and non-degradable waste

- **Solid Waste Management:**

To keep campus, keep clean, neat and tidy, Dustbins are placed in the college premises, corridors and office. The Institute has proper waste disposal mechanism. The solid waste is segregated into organic and is used to prepare compost for in-house consumption and non-degradable waste is collected by the Gram Panchayat Harsul. To maximize use of paperless technology i.e., sharing of data /Lecture notes on Google classroom, Google cite, college website e-mail etc. Cleanliness drive to collect solid waste in the campus by NSS students.

- **Liquid waste management:**

Chemical liquid waste generated in the lab is collected in separate soak pits which are located aloof from the water bodies. The soak pits are periodically emptied and dumped in special area outside the campus and town with due care.

E-waste management:

E-waste at our college refers to electronic equipment that has gone out of use. The cartridge of printer is refilled from a suitable vendor and reused it. The E-waste generated is handed over as scrap for recycling process to Gram Panchayat and local vendor, Harsul, Tal-Trambakeshwar Dist-Nashik.

Degradable and Non- Degradable Waste Management.

The college has taken an initiative for the management of solid and liquid waste management. Maximum waste material is recycled and reused. At the first with the help of all cleaning staff waste materials are segregate before dumped for disposal.

The various types of waste material are generated in the college campus like Paper waste, dry - natural waste (leaves) and liquid waste/ sewage and also huge amount of Garden waste in the form of leaves which is stored in separate chamber and treated the soil to shape fertilizer and utilized for natural cultivating. The liquid waste is reused through sewage treatment plant, and utilized for cultivating.

The concept of Reducing, reusing and recycling is introduced to the students. This also helped to enhance the subject knowledge of the students and the conservation of nature.

7.1.2 3. Water Conservation

Water conservation:

Our institution has taken initiative to conserve the water by applying rain water harvesting and artificial recharge of ground water project in college campus. For this purpose, a catchment area is identified. The recharge zones of aquifers also identified and integrated water harvesting development activities are implemented with proper planning and management. As a result, the following facilities are available in the institution:

- Bore-well/Open Well Recharge
- Rainwater Harvesting
- Water tank/bunds
- Water Distribution System in the Campus

Rain Water Harvesting

Rainwater harvesting (RWH) is the collection and storage of rain, rather than allowing it to run off. The college collects the rainwater from a roof with the help of pipe and redirected in a deep pit and reservoir with percolation, so it seeps down and restores the ground water. And the collected water is used for gardening and other use of plants.
